

Instruction:

- Use Calculator in BASIC mode
- Basic operation works: Addition, Subtraction, Multiplication, Division, Clear
- Linear layout used for both portrait and landscape orientation, usage of full screen
- Use Negative Sign before a number to allow for negative citation
- Pressing Decimal twice will ignore the decimal key
- Brackets append to display but do not function as expected
- FORMULA mode does not function as expected

Future Goals:

- Implement proper use case for brackets
- Implement FORMULA mode, allow resultDisplay TextField to show result and normal display to show Operators and Operands
